

# Sechrist Hyperbaric Chambers 1<sup>st</sup> in industry to offer color choices

Sechrist customers have enjoyed the clinical benefits from its leading edge hyperbaric chambers for over 30 years, including the industry gold standard Model 3200, and newer enhanced Models 3300E and 3600E which feature electronic controls that promote more efficient control, greater patient safety, and additional comfort during treatment. Now, for the first time, hyperbaric chamber customers can select Sechrist's state-of-the-art chambers in one of six signature colors – Diamond White, Sahara Beige, Platinum, Crystal Green, Jade Green and Sechrist Blue.

Clinical excellence and compassionate care go hand-in-hand, and having color choices will allow you to provide a visually appealing and attractive environment for your patients and their families.

Sechrist is uniquely positioned to offer color options due to the self-manufacturing of all critical components of its chambers, which includes custom painting. All manufacturing operations are vertically integrated. The unsurpassed quality the industry has grown accustomed continues because Sechrist designs, machines, paints and builds all its chambers on-site in one facility. On-site production, under rigid industry requirements, allows Sechrist to control all aspects of product manufacturing – labor, engineering, risk, and research & development.
